Virtual Desktop

DID YOU KNOW . . . *that using a large X Server workspace lets you create and use large View windows?*

What a Virtual Desktop Gives You
- *A large workspace for increased productivity*
- *Stretch very large View windows across the entire workspace*
- *Resize a View window for a full view of its geodata at a chosen map scale*
- *A Workspace Overview provides tools for moving all windows around in the workspace*

More memory allows you to have large View windows in the display process.

How to Set Up Your Large Workspace
- *Select Preferences from the MicroImages X Server title bar menu.*
- *Choose a Workspace Size in the MicroImages X Server Preferences dialog. (Your changes will take effect in the next session.)*
- *Use the Workspace Overview window to move around in the workspace.*
- *Resize a View window by selecting Resize To from its Options menu. If you have 128 Mb of RAM, try Double Height and Width.*

Move the red view box or drag the thumbnails in the Workspace Overview.
