# Copy Objects

DID YOU KNOW . . . you can copy files and most object types to a new location using Project File Maintenance?

What Copying with Project File Maintenance Gives You

- *Copy complete Project Files*
- *Copy individual objects of any type*
- *Copy subobjects of allowed types*
- *Back up only selected objects*
- *Validate Project File during copy process*

TNTmips offers extract processes for raster and geometric object types that will copy all or part of the selected input object(s). Project File Maintenance offers a simpler interface that can be used for any object type, Project Files as a whole, and reusable subobject types.

Style object copied from subobject level to main level in new Project File that will provide styles for a number of different objects or projects.

How to Copy with Project File Maintenance

- *Choose Tools/Manage Project Files from the menubar.*
- *Navigate to the Project File, object, or subobject you want to copy.*
- *Click on the Copy icon.*
- *Choose the destination Project File (new or existing).*
