# Geographically-Attached Group Clipping

DID YOU KNOW . . . you can clip groups using the extents of another group when two or more groups are geographically attached?
What Geographically-Attached Group Clipping Gives You
- *Clip a group so that only a selected portion of it is shown in the View window*
- *Use full extents of the geographically attached group to define the clipping area*
- *Quick clipping without needing to define the clipping area manually*
Group Settings icon

Group 2 and Group 3 are geographically attached to Group 1.

Toggling on this button allows you to use the Group 1's extents for clipping Group 2.

Group 1, Group 2, and Group 3 are displayed together without clipping.

Group 2 is clipped using the extents of Group 1, while Group 3 is not clipped.

Both Group 2 and Group 3 are clipped using the extents of Group 1.

How to Clip Geographically Attached Groups
- *Click on the Group Settings icon to open the Group Settings window.*
- *Set Horizontal Attachment To one of the groups listed on the Layout panel.*
- *Select Geographic from the menu to attach the active group geographically.*
- *Turn on the* Clip *toggle on the Clipping panel.*
- *Turn on the* Use geographically-attached group clipping *toggle.*
