

Save Groups and Layouts as Text Files

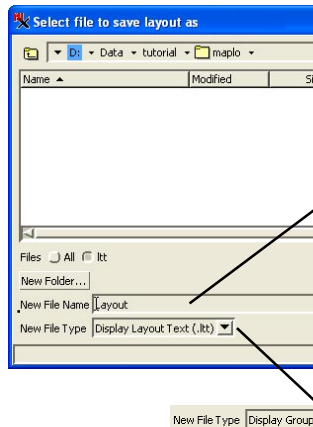

DID YOU KNOW . . . you can save groups and layouts in a text file format?

What Saving Groups and Layouts as Text Files Gives You

- Save new or existing groups/layouts in ASCII format
- Edit layouts/groups in a text editor
- Directly open or print the contents of the layouts in TNT after editing.

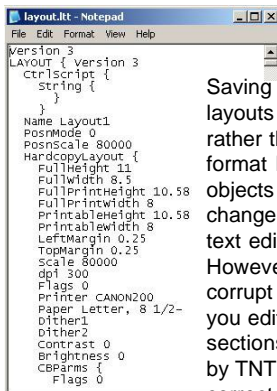

Selecting Save as Text from the menu opens the standard Select File window.

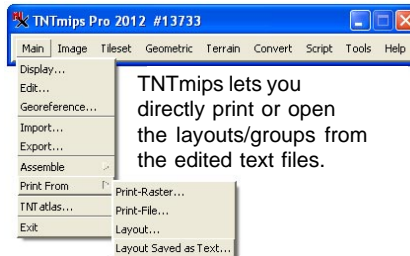

Enter a file name to save layout/group as a .litt/.gpt file.

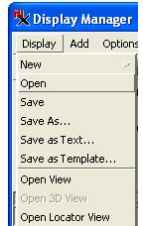

The extensions for the new text files are .gpt and .litt for groups and layouts, respectively.

Saving groups and layouts as text files rather than RVC format layout objects lets you change them in a text editor. However, you may corrupt the layout if you edit the sections required by TNTmips for correct display.

TNTmips lets you directly print or open the layouts/groups from the edited text files.

How to Save Groups and Layouts as Text Files

- Select *Save as Text* from the Display Manager's Display menu.
- Select an existing file or create a new one in the standard Select File window.
- Use any text editor to edit the layout/group saved as text file.
- Open the saved layout in the Display process using Display/Open.
