Show Style Samples in a Database Table

DID YOU KNOW . . . you can show samples of the drawing styles associated with different attributes in a database table?

What Showing Style Samples Gives You

- *A style field that shows the styles associated with different attributes*
- *Direct access to the style editor for selection and assignment of new styles*
- *Position the style field at the top or bottom in single record view*

Switching to Single Record view lets you select Style Sample from the Table menu.

Toggling on the Show Style Sample button on the Field menu adds a Style field to the tabular view.

The Style Sample menu in single record view lets you hide or position the style sample.

Style sample in tabular view

Note that the single record view and the tabular view have different preference settings for showing style samples.

Style sample at the top

Style sample at the bottom
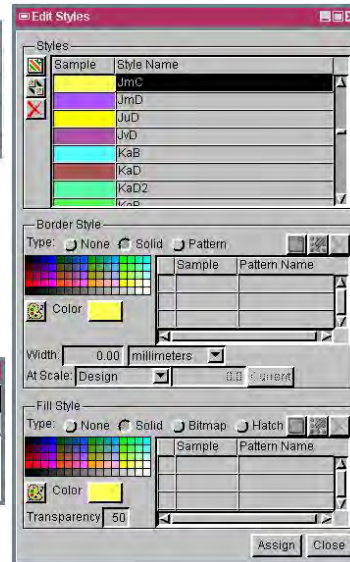

Click on the style sample in single record view or tabular view to open the Edit Styles window where you can select and assign new styles.

How to Show Style Samples in a Database Table

- *Toggle on the Show Style Sample from Field menu in tabular view; or select Style Sample from the Table menu in single record view.*
- *Position the style field by toggling on the Top or Bottom buttons.*
- *Click on a style sample to open the Style Editor window.*
- *Toggle on the Hide button in single record view or toggle off the Show Style Sample button in tabular view to hide the style field.*
